LandEnergy

Sustainability is at the heart of Land Energy's production plant which is situated in south west Scotland in the Ayrshire coastal town of Girvan.

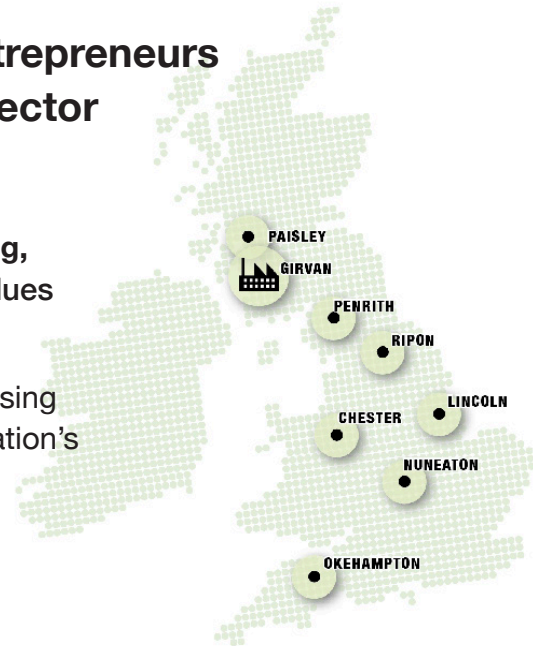

Founded in 2006, Land Energy was created by entrepreneurs committed to cutting pollution in the UK energy sector

Today, the company is the UK's largest manufacturer of wood pellets and briquettes, and has expanded into animal bedding, cat litter, and fungi-enriched living soils, turning natural forest residues into sustainable, high-quality products.

Land Energy now operates out of seven UK-wide distribution hubs using its own fleet of trucks and lorries. It makes and distributes six of the nation's favourite brands.

Land Energy also has a second pelleting plant in Lincoln dedicated to producing its fungi-filled living soils product.

Rooted in Nature for Real Environmental Gain

Land Energy is built around the principles of the circular economy and closed-loop production, with sustainability embedded throughout its operations and family of brands; Woodlets, Solivita, Sorbeo, and Kittilitt.

At our Girvan production facility, forestry residues and low-grade timber are transformed into premium biomass pellets, briquettes, horse bedding, cat litter and natural living soil products, ensuring valuable resources are continually reused.

Through recyclable packaging initiatives and recycling schemes, Land Energy reduces waste across the supply chain while supporting a more sustainable manufacturing process.

Our 'living soils' philosophy is central to the Solivita range, which returns nutrients, fungi, microbes and organic matter back into the ground to regenerate healthy soils naturally, much like the forest floor.

Land Energy also supports sustainable forestry and tree planting programmes to replenish woodland and maintain biodiversity for future generations.

This closed-loop system is strengthened by our own biomass Combined Heat and Power (CHP) boiler, which uses wood residue and forestry brush to generate renewable heat and electricity, dramatically reducing fossil fuel consumption and carbon emissions.

Together, our brands Woodlets, Sorbeo Horse Bedding, Kittilitt Cat Litter and Solivita demonstrate how we turn natural by-products into high-performance, sustainable products while keeping materials in continuous circulation.

LandEnergy

Real Environmental Gain

100,000

Tonnes of wood pellets
produced each year

45,000

Tonnes of wood briquettes
produced each year

1,000

Tonnes of used wood
pellets bags recycled

6

National brands

6,000,000

Trees planted every year

18.2

GWh of power produced
using our own
biomass boilers
